

Privilege Elevation & Delegation Management

Remove local admin rights. Enforce least privilege.

Most teams face a tough trade-off: keep users as local admins and accept the risk, or remove admin rights and deal with operational slowdowns. Syteca eliminates this trade-off. With privilege elevation, admin rights are granted only for approved actions, for a limited time, under clear rules, and with full visibility.

**Reduce the
attack surface**

**Eliminate IT
bottlenecks**

**Enforce least
privilege**

**Get a full audit
trail**

How it works

01

Action initiated

Admin rights required

02

Policy check

Allow • Approve • Deny

03

Access logged & auditable

Full audit trail for every action

Key capabilities

Elevate trusted apps silently

Automatically elevate trusted applications based on defined policies, with no access requests needed. Elevation can be limited to business hours.

Target with precision

Create rules using file hash, digital signature, executable name, path prefix, or command-line parameters. Upload files to extract attributes automatically.

Require justification for critical processes

Implement approval workflows with mandatory user comments, assigned approvers, time-limited access, and optional MFA verification before elevation is granted.

Block unauthorized software

Deny unapproved applications automatically. Users receive a clear denial message with guidance on next steps.

Record and audit every decision

Capture elevated sessions, including screen, input, and commands. Log every allow, deny, and approval with full context. Integrates with Syteca UAM for complete visibility.

Get alerts in real time

Notify approvers of new access requests. Show users a custom message when access is denied. Alert security teams on elevation failures.

Outcomes

For security teams

- Enforce least privilege and block malware escalation
- Gain visibility beyond the elevation prompt
- Support investigations with immutable evidence

For IT teams

- Reduce helpdesk tickets by up to 75%
- Standardize admin approvals
- Avoid breaking user workflows

For the business

- Lower risk without slowing operations
- Achieve compliance and audit readiness
- Get a better balance between security and productivity

Part of the Syteca Platform

Everything you need to control privileged access — securely and at scale.
